

# SAC VALLEY STATION

## History & Tour with the City of Sacramento

Join the Chapter for a tour of this 2017 AIA Central Valley Merit Design Award Winner!

The City of Sacramento has transformed our downtown's historic train depot, Sacramento Valley Station, into a transportation hub to serve all modes of travel to and from the station. The rehabilitation of this historic train station rescues a once state-of-the-art depot from years of disrepair and returns it to the latest standards for rail travel in a beautifully restored grand civic space. The 68,000 s.f. project vastly improves the traveler experience and supports efficient Amtrak operations. Sensitive interior and exterior improvements revive the original character while integrating improved circulation, high-performance building systems, life-safety and accessibility upgrades, and new commercial lease space. Since its opening in 1926, the historic station has served as the primary rail passenger station for northern California, and has grown in ridership to the nation's seventh busiest station.

*For reasonable accommodations or alternate formats, please contact AIA Central Valley at least 72 hours prior to the event: [info@aiacv.org](mailto:info@aiacv.org) or 916-444-3658.*

Original Architect: Bliss & Flaville (1926)

Renovation: ZGF Architects (2017)

Historic Preservation: Page & Turnbull (2017)
